

## Product Description

FA1 Butyl Strip sealant is generally used to seal the joints of Fatra Polythene Vapour Control Layers. It is manufactured from a high-tack formula which provides the necessary seal for these applications.

Where air-tightness of the steel deck is critical, the best way of achieving sufficient results is to use strip sealants on the laps. The range of strip sealants that we offer have been selected to suit the current specifications and provide options to suit all applications found on a flat roof.

## Physical Characteristics

Fatrafol FA1 Butyl Sealing Tape			
Thickness x Width (mm)	Roll length (m)	Rolls per carton	Product Code
1 x 12	45	20	FA1

## Technical Data

Fatrafol FA1 Butyl Sealing Tape	
	<b>Class A</b>
Density	<b>1.6</b>
Elongation at break (%)	<b>220</b>
Force to compress by 20% (N)	<b>220</b>
Joint movement accommodation	<b>± 15</b>
Temperature (°C)	<b>-40~110</b>
Service life (years)	<b>20</b>
Shear strength (N)	<b>16.2</b>
Tack	<b>Very good</b>
UV resistance	<b>Very good</b>
